TENSION CANOPY

Tension canopy is an aluminium structure designed and built in house by our own team. It is covered with PVC fabric, and is waterproof.

We manufacture special brackets to attach to your building, and can provide flashing and gutters for an outdoor room.

It is custom made to a very high standard and is designed to deal with a wide range of weather conditions all year round.

» Cool Awnings custom-make tension canopy to fit your home or business.

» Tension canopies are made from aluminium, powder coated and covered with waterproof fabric and sealed to your building.

» Flat or curved, 1/4 or 1/2 circle shapes.

» We recommend the use of PVC fabric to minimize stretching of the fabric.

» Fabric is tensioned over the frame and attached into place with rope track or stapled directly into the frame.

» Our awning are installed by our experienced awning installation team.

» Tension Canopies are usually directly attached to your building or onto special brackets and then extend out to poles on the opposite side.

» The frame can be powdercoated to a colour of your choice

» All our awnings come with a 5 year guarantee on fabric, hardware and installation.

Interest free and no repayments for 6 months.
