

PVC MESH vs CLEARGLASS PVC

PVC Mesh is an excellent option for outdoor blinds.

- » Has reinforcing throughout the fabric to provide strength and it is very hard to tear.
- » Provides privacy,
- » Breaks the wind,
- » Blocks the UV
- » Is available in various openness factors from 1% to 10% open-ness (90% to 99% block).
- » PVC mesh will reduce rain entry down to a fine mist coming in around only 300mm.
- » PVC mesh has a 10 year warranty and as the fabric comes between 2400 and 3200mm wide we can usually avoid joins in your out-door blind.

Clearglass is an excellent option for sheltered areas with low traffic.

- » Clearglass PVC has its limitations:
- » Clearglass PVC has no reinforcing so has no strength and is easy to tear. To give it strength we weld on a coloured PVC border.
- » Clearglass PVC shrinks and expands as the temperature changes, this will cause rippling when it joins with other fabrics and must be allowed for in trapped side channel systems.
- » Scratches easily
- » Doesn't always roll up straight
- » Sticks to itself when rolled up for any length of time
- » Goes cloudy when rolls away wet.

OUTDOOR BLINDS / DROP CURTAINS

- » Outdoor blinds are great option to increase privacy to your deck and garden and to help form an outdoor room.
- » Ideal for increasing the indoor/outdoor flow of your home or business and are a lot cheaper to install than glass.
- » Cool Awnings custom-make outdoor blinds to fit your home or business.
- » Outdoor blinds/Drop curtains are very flexible and can be rolled away when not required.
- » Outdoor blinds are NOT a wind rated product, so are not suitable for high wind areas and the warranty does not cover wind damage.

- » They are made from 0.75mm fire retardant Clearglass PVC with a coloured PVC border for strength or top quality PVC Mesh.
- » They can be controlled by hand, crank, spring or motor and are manufactured using a high frequency welding process.
- » Installed by our experienced awning installation.
- » All the hardware and most fabrics come with a 5 years warranty and the hardware can be powder coated to match any fabric or paint colour.

HAND ROLLED

- » Basic hand rolled blinds are rolled up and down by hand.
- » Hand rolled drop curtains are attached at the top by a rope in an aluminium rope track.
- » They have a fabric pocket at the bottom, with an aluminium square bar to allow easy rolling of the curtain up to the Velcro ties and to keep the fabric flat.
- » Hand rolled drop curtains are attached to the ground using straps and buckles threaded through s/s ground fittings.
- » The straps and buckles allow for tightening of the drop curtains.
- » Size is only limited by your physical ability to roll them away.

CHANNEL SIDES

- » The crank operated Channelled system has an open aluminium channel on each side, which the fabric travels down.
- » The side channels are 90mm wide.
- » The Channelled drop curtains have an extruded aluminium bottom bar to keep the fabric flat, which can be locked in place at various points down the channel. No ground fixings are required.
- » The Channelled system has an optional attractive headerbox.
- » The channels & bottom bar will be powder coated to match your home or fabric and we have a great range of fabrics available.
- » Maximum size of the channel side system is 5m (W) x 3m (D).

ZIPS AND GUIDES

- » Take a hand rolled curtain and add zips and rope track to either side and you have the Zips and Guides curtain.
- » This is still rolled away by hand, but has no gaps either side and, when down, forms a complete wall.
- » Zipped drop curtains are attached on three sides by rope in an aluminium rope track.
- » They have zips up both sides of the curtain with an aluminium square bar in a small pocket at the bottom, to allow easy rolling of the curtain up to the Velcro ties and to keep the fabric flat.
- » Zipped drop curtains can be up to 5.5m wide with a 3.0m drop, and xtra zips can be located at various places on the curtain to form doors etc.

ZIPTRAK/COOL TRAK

- » Our spring loaded Ziptrak/Cooltrak system is a great solution for vertical screening of cafes, patios and verandas.
- » The Ziptrak/Cooltrak system is unobtrusive when up, aesthetically pleasing when down.
- » They are custom made to blend easily into your environment, and simple to operate - specialised spring loaded roller and aluminium side channels mean the screen glides easily, smoothly up or down and will stay in any position anywhere you choose.
- » The bottom catches lock the screen in down position for heavier weather.
- » There are no zips, ropes, pulleys, bulky tracks, buckles or gaps on either side.
- » Maximum size up to 4.0m wide in PVC mesh and 3m wide in clearglass PVC with a 3.0m drop.

CRANK ROLLED

- » Crank rolled outdoor blinds are our most popular style, being easy to use and yet affordable.
- » When the product is not in use, it is rolled away at the top onto an aluminium roller tube keeping the fabric flat and ready for use next time.
- » They wind away using a crank handle.
- » They have a fabric pocket at the bottom, with an aluminium square bar to keep the fabric flat.
- » Stainless steel (s/s) saddles with boat snaps are attached to this bar, which then link to s/s ground fittings.
- » Fabric options include 0.75mm fire retardant clear-glass PVC, with a coloured border reinforced PVC as well as a large range of mesh fabrics.
- » Crank rolled drop curtains can be up to 5.5m wide with a 3.0m drop.

HEADERBOX COVER

- » All our systems can have an optional attractive headerbox.
- » Extruded aluminium, powdercoated to match, protects the fabric from UV and birds & blocks gap.

Motorise your blinds

The crank, channelled and Ziptrak style blinds can all be motorised. We have several types of motors available depending on your budget.
